

Paediatric morphine Infusion

Concentration: 1 mg/mL

Admixture:

20 mg diluted to a total volume of 20 mL for 1 mg/mL

or

50 mg diluted to a total volume of 50 mL for 1 mg/mL

Flow rates not listed above may be calculated using the following equation:

Values have been rounded off

$$\text{mL/h} = \frac{\text{dose (mcg/kg/h)} \times \text{weight (kg)}}{\text{concentration of infusion solution (mg/mL)} \times 1000}$$
